SUBCELLULAR LOCATION: Secreted.

DISEASE: STRAINS OF E.COLI THAT CAUSE INFECTION OF THE HUMAN URINARY TRACT PRODUCE PAP-PILI WHICH ARE HAIR-LIKE APPENDAGES CONSISTING OF ABOUT 1000 HELICALLY ARRANGED SUBUNITS OF THE PROTEIN PAPA. THESE PILI MEDIATE BINDING TO DIGALACTOSIDE-CONTAINING GLYCOLIPIDS PRESENT ON THE EPITHELIAL CELLS WHICH LINE THE URINARY TRACT.

SIMILARITY: BELONGS TO THE FIMA/PAPA FAMILY OF FIMBRIA PROTEINS.

-I- FUNCTION: URIDINE MONOPHOSPHATE KINASE (BY SIMILARITY).
-I- CATALYTIC ACTIVITY: ATP + UMP = ADP + UDP.
-I- SIMILARITY: TO OTHER UMP KINASE; SOME, TO ASPARTOKINASES AND TO GLUTAMATE KINASES.

Proc. Natl. Acad. Sci. U.S.A. 96:38-43(1999).
-I- CATALYTIC ACTIVITY: DEGRADATION OF DOUBLE-STRANDED STRANDED DNA. IT ACTS PROGRESSIVELY IN A 5' TO 3' E RELEASING 5'-PHOSPHOMONONUCLEOTIDES.
-I- COFACTOR: REQUIRES DIVALENT CATIONS FOR ACTIVITY.
-I- SIMILARITY: CONTAINS 1 5'-3' EXONUCLEASE DOMAIN.

"The SIT4 protein phosphatase functions in late G1 for progression into S phase.";
Mol. Cell. Biol. 11:2133-2148(1991).
-i- FUNCTION: INVOLVED IN THE DEPHOSPHORYLATION OF THE LARGE SUBUNIT OF RNA POLYMERASE II. IS REQUIRED IN LATE G1 FOR NORMAL G1 CYCLIN EXPRESSION, BUD INITIATION AND EXPRESSION OF CERTAIN GENES THAT ARE PERIODICALLY EXPRESSED DURING LATE G1. ASSOCIATES WITH THE SAP PROTEINS IN A CELL CYCLE-DEPENDENT MANNER.
-i- CATALYTIC ACTIVITY: A phosphoprotein + H(2)0 = a protein +
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       "A suppressor of a HIS4 transcrine homology to the catalytic subunicell 56:527-537(1989).

CATALYTIC ACTIVITY: 3-CARBOXY-2-HYDROXY-4-METHYLPENTANCATE
NAD(+) = 3-CARBOXY-4-METHYL-2-OXOPENTANOATE + NADH (THE PRO
DECARBOXYLATES TO 4-METHYL-2-OXOPENTANOATE).
PATHWAY: THIRD STEP IN LEUCINE BIOSYNTHESIS.
SUBUNIT: HOMODIMER (BY SIMILARITY).
SUBCELLULAR LOCATION: Cytoplasmic.
SIMILARITY: BELONGS TO THE ISOCITRATE AND ISOPROPYLMALATE
DEHYDROGENASES FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    VLPDSVV

Biophys. Res. Commun. 228:1-6(1996).

-!- CATALYTIC ACTIVITY: Cleavage of a gamma-glutamyl an unsubstituted C-terminal amino acid.

-!- SUBCELLULAR LOCATION: EXTRACELLULAR OR CELL-WALL-
-!- TISSUE SPECIFICITY: EXPRESSED ONLY IN YOUNG (1-15 STEM AND ROOT TISSUE.

-!- SIMILARITY: BELONGS TO PEPTIDASE FAMILY C26.

NARINGENIN.

NARINGENIN.

CATALYTIC ACTIVITY: 3 malonyl-CoA + 4-coumarcy carringenin-chalcone + 3 CO(2).

PATHWAY: PART OF THE BIOSYNTHETIC PATHWAY FOR FLAVONOIDS, A LARGE CLASS OF SECONDARY PLANT MOF WHICH ARE BRIGHTLY COLORED.

SIMILARITY: BELONGS TO THE CHALCONE/STILBENE SECONDARY PLANT MORE CHALCONE/STILBENE SECONDARY PLANT MORE CHALCONE/STILBENE SECONDARY PLANT MORE CHALCONE/STILBENE SECONDARY PLANT MORE CHALCONE/STILBENE SECONDARY PLANT MORE CHALCONE/STILBENE SECONDARY PLANT MORE CHALCONE/STILBENE SECONDARY PLANT MORE CHALCONE/STILBENE SECONDARY PLANT MORE CHALCONE/STILBENE SECONDARY PLANT MORE CHALCONE/STILBENE SECONDARY PLANT MORE CHALCONE/STILBENE SECONDARY PLANT MORE CHALCONE/STILBENE SECONDARY PLANT MORE CHALCONE/STILBENE SECONDARY PLANT MORE CHALCONE/STILBENE SECONDARY PLANT MORE CHALCONE/STILBENE SECONDARY PLANT MORE CHALCONE/STILBENE SECONDARY PLANT MORE CHALCONE/STILBENE SECONDARY PLANT MORE CHALCONE/STILBENE SECONDARY PLANT MORE CHALCONE/STILBENE SECONDARY PLANT MORE CHALCONE/STILBENE SECONDARY PLANT MORE CHALCONE/STILBENE SECONDARY PLANT MORE CHALCONE/STILBENE SECONDARY PLANT MORE CHALCONE/STILBENE SECONDARY PLANT MORE CHALCONE/STILBENE SECONDARY PLANT MORE CHALCONE/STILBENE SECONDARY PLANT MORE CHALCONE/STILBENE SECONDARY PLANT MORE CHALCONE/STILBENE SECONDARY PLANT MORE CHALCONE/STILBENE SECONDARY PLANT MORE CHALCONE/STILBENE SECONDARY PLANT MORE CHALCONE/STILBENE SECONDARY PLANT MORE CHALCONE MORE CHALCONE MORE CHALCONE MORE CHALCONE MORE CHALCONE MORE CHALCONE MORE CHALCONE MORE CHALCONE MORE CHALCONE MORE CHALCONE MORE CHALCONE MORE CHALCONE MORE CHALCONE MORE CHALCONE MORE CHALCONE MORE CHALCONE MORE CHALCONE MORE CHALCONE MORE CHALCONE MORE CHALCONE MORE CHALCONE MORE CHALCONE MORE CHALCONE MORE CHALCONE MORE CHALCONE MORE CHALCONE MORE CHALCONE MORE CHALCONE MORE CHALCONE MORE CHALCONE MORE CHALCONE MORE CHALCONE MORE CHALCONE MORE CHALCONE MORE CHALCONE MORE CHALCONE MORE CHALCONE MORE CHALCONE MORE CHALCONE MORE CHALCONE MORE CHALCONE MORE CHALCONE MORE CHALCONE MORE CHAL

Billy E., Wegierski T., Nasr F., Filipowicz W.;

"Rcllp, the yeast protein similar to the RNA 3'-phosphate cyclase,

associates with U3 snoRNP and is required for 18S rRNA biogenesis.";

EMBO J. 19:2115-2126(2000).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                use by non-profit institutions as long as its content is in no way modified and this statement is not removed. Phosphoribosylglycinamide formyltransferase 2 (EC 2.1)

(GAR transformylase 2) (5'-phosphoribosylglycinamide)

(GAR transformylase).
        Haga K., Liu H., Yasumoto K., Takahashi H., Yoshikawa H.;

"Sequence analysis of the 70kb region between 17 and 23 degree of the Bacillus subtilis chromosome.";

Submitted (JUL-1997) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: CATALYZES TWO REACTIONS:THE FIRST ONE IS THE PRODUCTION OF BETA-FORMYL GLYCINAMIDE RIBONUCLEOTIDE (GAR) FROM FORMATE, ATP AND BETA GAR; THE SECOND, A SIDE REACTION, IS THE PRODUCTION OF ACETYL PHOSPHATE AND ADP FROM ACETATE AND ATP.

-!- CATALYTIC ACTIVITY: FORMATE + ATP + 5'-PHOSPHO-RIBOSYLGLYCINAMIDE - 5'-PHOSPHORIBOSYL-N-FORMYLGLYCINAMIDE + ADP + PYROPHOSPHATE.

-!- COFACTOR: MAGNESIUM (BY SIMILARITY).

-!- PATHWAY: THIRD STEP (FIRST OF TWO TRANSFORMYLATION REACTIONS)

IN DE NOVO PURINE BIOSYNTHESIS. THIS IS AN ALTERNATIVE ENZYME TO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This SWISS-PROT entry is copyright. Lechner K., Heller G., Boeck A.;

"Organization and nucleotide sequence of a transcriptional unit of Methanococcus vannielii comprising genes for protein synthesis elongation factors and ribosomal proteins.";

J. Mol. Evol. 29:20-27(1989).

-!- FUNCTION: DNA-DEPENDENT RNA POLYMERASE CATALYZES THE TRANSCRIPT OF DNA INTO RNA USING THE FOUR RIBONUCLEOSIDE TRIPHOSPHATES AS SUBSTRATES.

-!- CATALYTIC ACTIVITY: N nucleoside triphosphate = N diphosphate +
                                                                                                                                                                                                                                                                                                                                          Palm P., A Submitted

"A gene encoding the major beta tubulin of the mitotic spindle in Physarum polycephalum plasmodia.";

Mol. Cell. Biol. 8:1275-1281(1988).

-!- FUNCTION: TUBULIN IS THE MAJOR CONSTITUENT OF MICROTUBULES. I BINDS TWO MOLES OF GTP, ONE AT AN EXCHANGEABLE SITE ON THE BE CHAIN AND ONE AT A NONEXCHANGEABLE SITE ON THE ALPHA-CHAIN.

-!- FUNCTION: THIS IS THE MAJOR BETA TUBULIN OF MITOTIC SPINDLE.

-!- SUBUNIT: DIMER OF ALPHA AND BETA CHAINS.

-!- SUBCELLULAR LOCATION: MITOSIS IN THE SLIME MOLD PLASMODIUM DIFROM THE PROCESS IN MANY EUKARYOTES. THE TUBULIN CHAINS MUST TRANSPORTED TO THE NUCLEI FOR INTRANUCLEAR ASSEMBLY OF THE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             рнуро
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   modified and this statement is not removed.
